

# **Statement of Scope for the Climate Project**

## **History**

A database is needed to drive a climate action site as a resource of information for members.

## **Scope**

Database will provide resources and links to sites and documents with useful information. It will also provide a calendar of events, offered by the climate site or other organizations and institutions. Fundraising is anticipated such as T-shirts, cups, books, posters, etc. to raise enough money to support the site. Anyone that donates over 20 dollars becomes a member automatically, although they do not have to donate to become a member.

People will register in order to contribute articles or links to events. There will be a small staff that validates the links to make sure they are legitimate, and to oversee donations and such.

People who register can agree to receive newsletters that will update them about new information on the side. Anyone should be able to view the resources and events and be able to buy merchandise or donate.

## **Constraints**

The database will not handle generation of some materials.
